

Agave weberi

COMMON NAME	Weber Agave
FAMILY	Agavaceae
ORIGIN	North America
EVERGREEN	Yes
FLOWER COLOUR	Yellow
BLOOMTIME	Infrequent
SYNONYMS	-
HEIGHT	1 - 2 Metres
WIDTH	2 - 2.5 Metres
EXPOSURE	Full Sun
SEASIDE	-
IRRIGATION	Low Water Needs
WINTER HARDINESS	-12° C

FURTHER READING:

Medium-sized rosette of fleshy, spine-tipped gray-green leaves with finely-toothed margins to 1.5 - 2 metres tall by 2 - 2.5 metres wide. Bright yellow flowers flower on 20' branched stalks at maturity. Plant in full sun to light shade in well-draining soil. Hardy to -12° C. The neotype for this species is noted as from between Laredo and Catarina in Texas, but an occurrence of a native planting is no longer known, although there are many variants found as cultivated plants in arid areas of north-central and north-eastern Mexico and Southern Texas.
